

K-25 RADIAL

CUT AND FORM A VARIETY OF RADIAL COMPONENTS

K-25 BOWL FEEDER SYSTEM

Feed, cut, and form a variety of radial components.

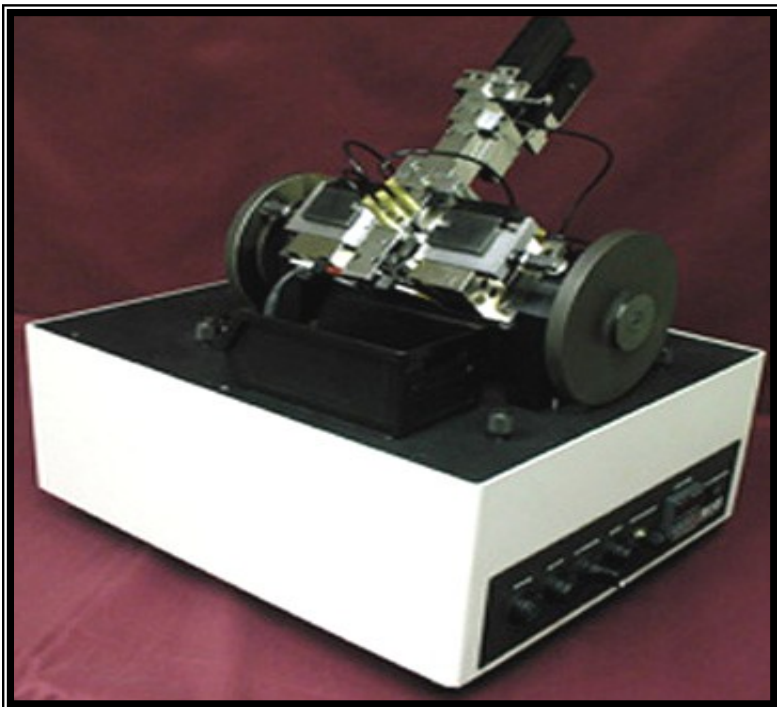

Bowl Feeder System includes base unit, tooling of your choice, feed chute, vibratory bowl with speed controller, and sensors for bowl shut-off.

Bowls available for power transistors, transistors, LEDs, SIPs and even capacitors.

Walk-away hands free system.

Component counter stops when pre-set amount is reached.

One-year warranty parts and labor

K-25 TUBE FEEDER SYSTEM

Feed, cut, and form any radial component in tube.

Tube Feeder System includes base unit with tooling of your choice, feed chute, and adjustable tube holder.

Feed components into a bin or receiver tube adaptor bracket for tube to tube component processing.

Air manifold system separates components for proper cutting and forming.

Exit sensor counts components and detects for jams.

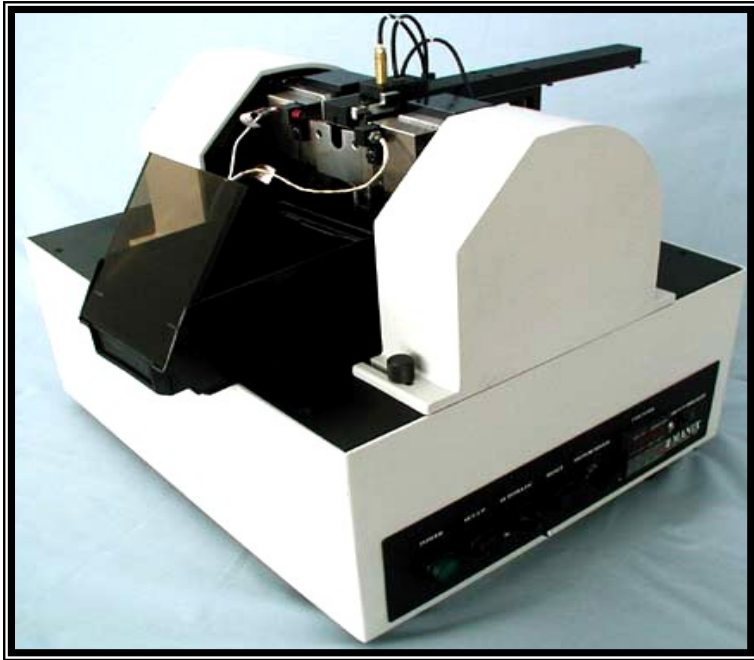

Operates on 120 VAC and 30 psi.
